

UX UI Assignment

Brief

You have to design a web page for either:

- Compliment generator
- "Can't come tonight" excuses generator

This task can be accomplished in many different ways: keeping it straightforward or enhancing it with complex visual elements. You can use a simple *Button and Result* approach or go wild with crazy filters and handy settings.

Keep in mind the users' needs and use your best judgment to come up with the solution.

Deliverables

A Sketch, Figma or Adobe XD file, containing the web page adapted for two screen sizes: desktop and mobile.
